

Bio-Diesel Blending Units

This Bio-Diesel Blending Station is a portable; above ground and self contained dispensing system that blends Bio-Diesel and regular Diesel onsite into B20, B50, and B99 products. The blend can also be programmed to suit individual needs as well. Packed with features, this blending station is suitable for almost any location. Retailers will appreciate the dispensing pump that includes a credit card reader with an interface to accept both MasterCard and Visa. This feature allows 24/7 un-staffed operation. Fleet operators will benefit by consistently using the correct blend for each piece of equipment. The eye catching design includes the safety of fireguard above ground tanks available in 5,000 or 10,000 gallons. Each tank is heated to offer the protection from gelling and the benefit of blending at temperature.

This is a stand alone unit that will scientifically blend any blend of biodiesel. It has the ability to put out biodiesel at 350 Gallons per minute and if run non-stop it could put out 180 million gallons annually. It uses an injection blending technology that surpasses any blending technology out there. This set up is a 30 thousand gallon gross set up which could be configured per customer's needs. There is a one year manufacturer warranty with these units.

Your cost is \$179,000USD plus freight for this base unit and a delivery lead time of 12 weeks.

How It Works

This portable self contained fuel station arrives pre-assembled. Simply select a location, run power to it and your ready to dispense fuel. No holes to dig, plumbing to run or assembly. It's the hassle free way to introduce alternative fuels at your station, or use them for your fleet.

Just like any fuel station pump, a customer can pull up, insert their credit card, and purchase any one of three blends to fuel their diesel vehicle. The fuel is blended by two electronically controlled pumps and metering valves before being sent through the filling hose to the customer's fuel tank.

Where Can I See One?

The first ever Bio-diesel Blending Station has been installed in Manitowoc, WI and sells B20, B50, and B99 bio-diesel blends. Contact us directly for purchase your own unit.

Benefits of the Bio-diesel Blending Station

The installation of alternative fuel stations offers several benefits. The federal government is offering a tax credits towards the installation alternative fueling stations. There are many states that also offer a credit or incentive for the installation of alternative fueling stations. In some cases fuel blending credits may also be available. Additionally, each station installed decreases our dependence on foreign oil and utilizes a cleaner, greener fuel. American Fuel Blending Systems goal is to increase the distribution of alternative fuels. This blending system provides retailers with a simple convenient means of providing alternative fuels to their customers.
